

Battery Compatibility Overview

This document lists the compatible batteries with all GoodWe storage inverters, consisting in 4 system types:

- 1) Low-voltage energy storage systems
- 2) High-voltage energy storage systems
- 3) Commercial and industrial energy storage systems
- 4) High-voltage Energy Storage Systems (for U.S only).

Only batteries listed in this document are approved for connection to GoodWe storage inverters according to GoodWe Limited Warranty.

A-ES/A-BP: *1. ARM firmware versions 20 and above and DSP versions 05 and above are required for compatibility. *2. When A-BP is compatible with LG RESU HV Series, the micro-grid applications are not supported. *3. The compatibility of A-ES/A-BP with LG RESU10H Type-R is stated as follows: 1) Connection of RESU10H Type-R batteries in parallel is not supported. 2) For first inverter operation with LG battery, the inverter must be powered by the grid for the LG battery to be activated. 3) LG RESU10H Type-R battery Max discharge power is 5kW. Please ensure backup load peak power does not exceed 5kVA in backup mode. Loads with large inrush current (such as inductive loads including motors) may lead to output failure on backup side. 4) Depending on real-time battery condition, such as SOC, battery temperature etc, the battery output power may not be able to support backup load, which could lead to system failure. If this occurs, both battery and backup supply will cease. Power will resume if there is solar power available. 5) LG battery needs time to switch from charge to discharge up to the preset power. Quickly switching from on-grid mode to backup mode could fail if backup load power is higher than the max power ramp-up the battery can sustain within a limited time. *4. ARM firmware versions 05 and above and DSP versions 02 and above are required for compatibility.
